USCDI+ Public Health Update

**Katie Tully, MSPH – Branch Chief Alignment Branch,
Networks and Scalability Division**

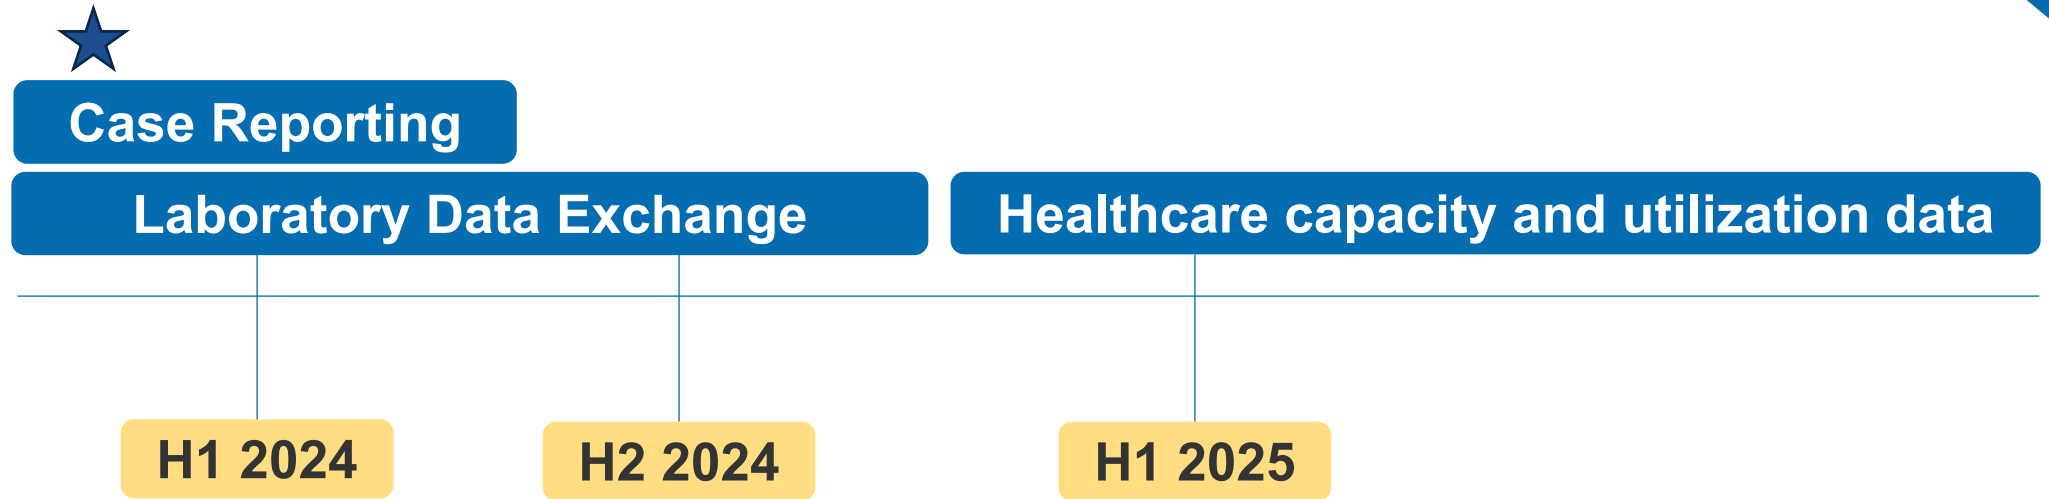

USCDI+: Extending Beyond the USCDI

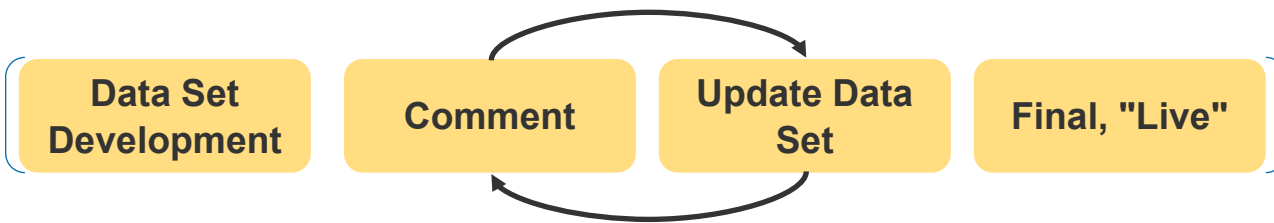

- Unique program and use case-specific data needs are sometimes not fully met by USCDI.
- ONC's USCDI+ initiative helps government and industry partners build on USCDI to support special program needs.
- Applies USCDI processes for submission and harmonization while focusing on programmatic priorities.
- Seeks to leverage programs and authorities across HHS to drive adoption.
- USCDI+ for Quality and Public Health kicked off by CDC, CMS & HRSA.

Draft Roadmap for USCDI+ PH Data Sets

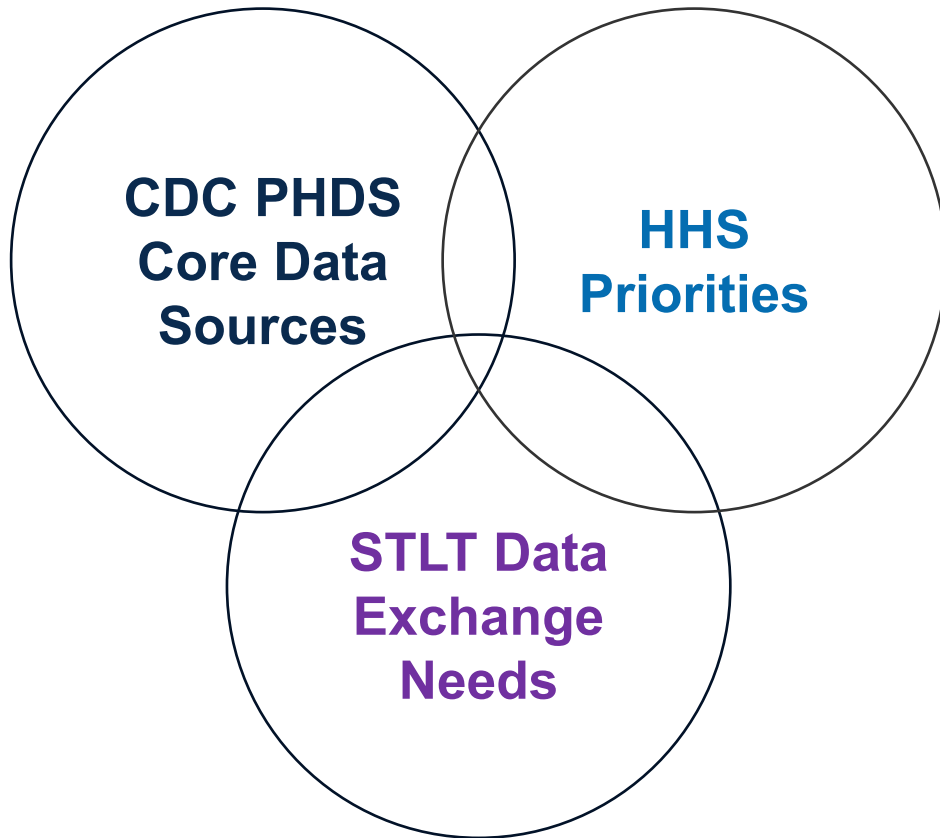

Every Use Case Will Follow the Same Process
(Mature Data Sets, ~1 Year)

CDC Minimum Data Necessary (MDN) Datasets

- Case Data
- Laboratory Data
- Emergency Department Data
- Vital Statistics Data
- Immunization Data
- Healthcare capacity and utilization data

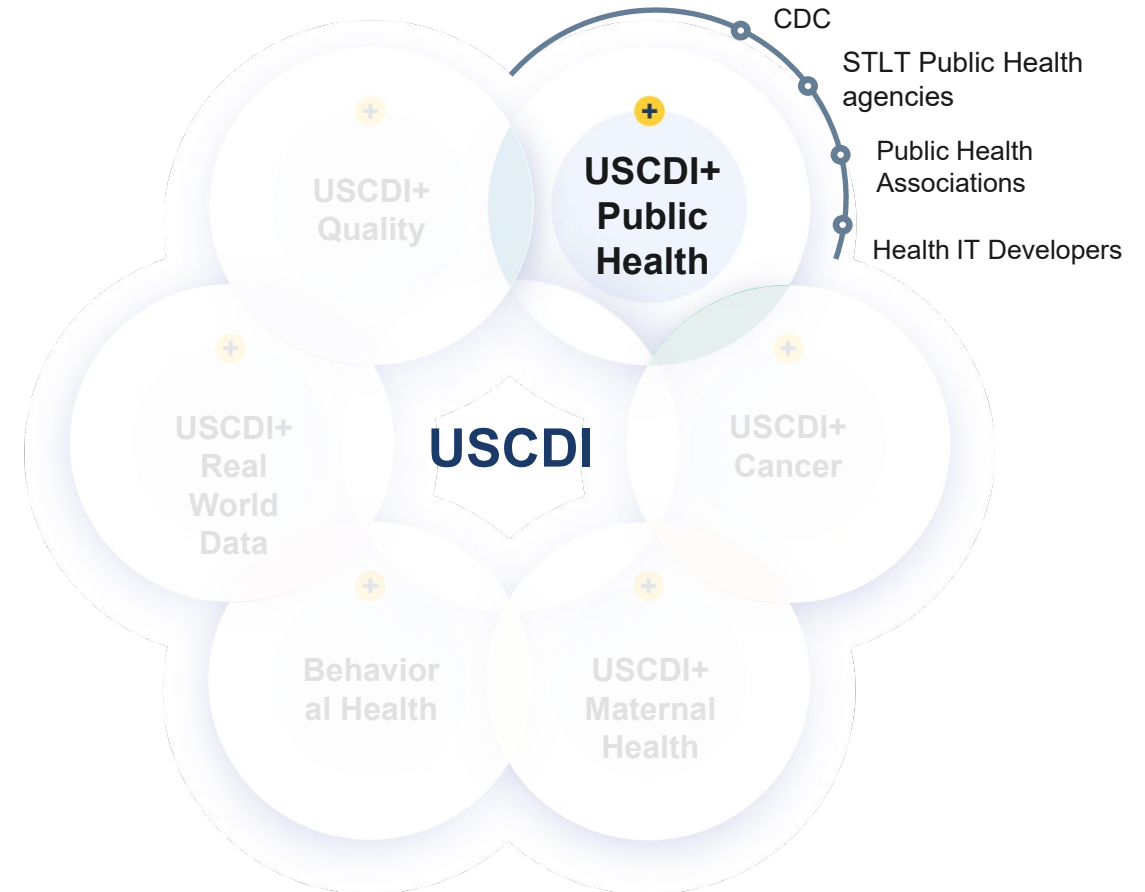

USCDI+ PH Data Set Prioritization

- Immediate priority will be development of datasets aligned with each “core data source” under CDC PHDS.
- Will leverage and build upon CDC Minimum Data Necessary (MDN) for each core data source.
- Future processes to explore datasets beyond CDC Core Data Source.

USCDI+ Public Health

- Capture the data needs of public health that fall outside the scope of USCDI; improve data quality and availability
- Current use cases:
 - Case Reporting
 - Laboratory Data Exchange
- Comment period open for Case Reporting and Laboratory Data Exchange closed April 5, 2024.
 - 397 comments received.
 - Comments received from 14 organizations, with PH association, public health agency, and health IT Vendor representation.
- Datasets under development for other use cases.
- **Datasets will be used to directly inform updates to core PH Profile implementation guidance in HL7.**
